Muhammad Maftuh

Student & Full-Stack Developer — web, AI agents, and automation · Bandung, Indonesia

maftuhade123@gmail.com · github.com/Maftuuh1922 · huggingface.co/maftuh-main · linkedin.com/in/muhammad-maftuh-798331386 · porto-maftuh.vercel.app

SUMMARY

Builds software end to end: data design, backend, interface, and deployment to production. Creator of Neovarch Agent, an open-source AI agent that runs on your own PC and is controlled from an Android phone (v1.4.8, with a technical report). Founder and lead developer of NeovarchLabs, a studio whose site runs its own ordering, QRIS payments, invoices, and receipts in production. Also writes open-source safety tools for coding agents, Omarchy (Linux) plugins, and batik AI projects.

SKILLS

Languages	TypeScript · JavaScript · Python · Dart · Kotlin · QML · Luau
Web & desktop	React · Next.js · Astro · Tailwind CSS · Hono · Electron
Mobile	Flutter · Jetpack Compose
AI / ML	AI agents & agent harnesses · Agent Skills · RAG & retrieval · QLoRA fine-tuning · TensorFlow.js · YOLOv8 · LoRA
Data & services	Prisma · Turso / SQLite · PostgreSQL · Firebase · Cloudflare Workers · REST APIs · payment webhooks (DOKU QRIS) · Resend
Tools	Git · GitHub · Vercel · Linux (Omarchy) · ffmpeg · Chrome extensions (Manifest V3)

PROJECTS & WORK

Neovarch Agent

Creator · open source · v1.4.8

Electron · React · TypeScript · Python · Flutter | neovarchagent.web.id · github.com/Maftuuh1922/neovrach_Agent

- AI agent that runs on your own PC (Windows, Linux) and is controlled from an Android phone; the desktop is the core (chat with tools, sessions, skills, memory, a Kanban board) and the phone is a remote paired by QR code.
- Works with any model that speaks the /chat/completions API: OpenAI, OpenRouter, Groq, DeepSeek, Ollama, or a local server.
- Technical report (Oct 2026): “Neovarch Agent: A Local-First, Phone-Controlled Coding Agent with a Lean, Verification-Gated Harness” — architecture, the Tempest harness, safety model, and the benchmarks that were actually run.

NeovarchLabs

Founder · lead developer · in production

Next.js · Tailwind · Prisma · Turso · DOKU · Resend | neovarchlabs.web.id

- Studio site that doubles as the ordering system: clients pick a package and pay right away with QRIS via DOKU; payment status is detected automatically, with no admin involved.
- Order flow from awaiting payment to done, visible on the client’s own dashboard; invoice and receipt sent by email; revenue counts only settled payments.
- Built the data schema, DOKU integration and webhooks, order flow, transactional email, and admin and client dashboards, together with a co-founder.

Tools for coding agents

leave-no-trace · not-mine · catch-22-skill · open source

Python · Agent Skills | github.com/Maftuuh1922

- leave-no-trace: snapshots the machine before an agent session and prints a “receipt” of every trace left outside the requested diff, with evidence per line; lnt revert --apply rolls it back.
- not-mine: an ownership check before an agent kills a process, deletes a file, or deploys something that isn’t its own; single-file, zero-dependency CLI.
- catch-22-skill: when tests truly can’t pass, detects contradictory specifications and hands the decision to a human instead of deleting tests.

Nalar.Ai

Designer & developer · landing page live

TypeScript · Python · RAG | github.com/Maftuuh1922/Nalar.Ai

- Educational AI assistant with RAG and document analysis; answers are referenced back to their source documents, with a separate Python backend (Nalar.ai-be) for indexing and search.

BatikLens · Wastra.ai · batik models

live

React · TensorFlow.js · Cloudflare Workers · Next.js · YOLOv8 · LoRA | huggingface.co/maftuh-main

- BatikLens: recognizes batik motifs from the camera or a photo in the browser (TensorFlow.js, MobileNet) and explains their philosophy.
- Wastra.ai: recognize, learn about, and create batik motifs, with a YOLOv8 detection model and a LoRA generator from my Hugging Face account.

Omarchy (Linux desktop)

Boxtop v1.5 · Neovarch Glass · Omarchy Pocket

QML · Quickshell · Python · Kotlin | plugins.omarchy.org

- Boxtop: btop-style bar widget (CPU, memory, network, processes) with a ≥ 4.5:1 contrast guard; listed on the Omarchy plugin marketplace.
- Neovarch Glass theme for Omarchy v4; Omarchy Pocket (early development) to control the desktop from an Android phone over TLS WebSocket.

Pagarnet

open source

JavaScript · Chrome Extension | github.com/Maftuuh1922/Pagarnet

- Chrome extension that blocks online gambling sites, hidden ads, and scams in real time, with a step-by-step install guide for non-technical users.

OTHER PROJECTS

fotobooth (vintage photobooth in the browser) · Amoures Tour Operator (tour operator site) · Eighteen (cinematic birthday site) · Flutter apps: aplikasi_berita, sales-management, Tunein · in development: Kabur dari Pocong (co-op Roblox horror game), Kisah Adab Studio.

NOTES

Profile counts taken from GitHub and Hugging Face on 16 October 2026: 59 public repositories · 11 followers · 8 models · 5 Spaces · 1 dataset. Every project, with real screenshots: porto-maftuh.vercel.app/work
